

Beforehand -- Inspecting the Area

Daniel Freitas' Eagle Project for:

**Milwaukie Presbyterian Church
2416 SE Lake Rd
Milwaukie, OR 97222**

Website:

<http://www.milwaukiepres.org>

This project benefitted the community & Milwaukie Presbyterian Church. The church owns property down to Kellogg Lake behind the rear parking lot. The church was (& still is) working to remove invasive species of plants from this property.

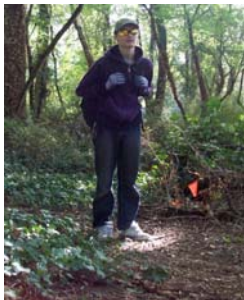

There is a peninsula that extends into the lake that needed a trail for access. A 30-36" wide trail (approximately 500' long) was cleared from a small creek bed to the end of the peninsula. There was a 'crude' path that was entirely overgrown by blackberry vines & English ivy. A very simple bridge was also asked for to get over the small creek bed.

As the trail was cleared, 4-5" of shredder chips were put down on the trail to prevent plant regrowth & maintain a natural look. Then a 'basic' foot bridge was added to allow for easier crossing of the creek bed.

Trail Clearing

Shredder Chips for the Trail

Building the Bridge

After the work was done
